EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dan Hu (US 40,025) on May 28, 2010.

The claims have been amended as follow (underlined):

Claim 1. A method of performing wireless communications, comprising:
communicating bearer traffic for a packet-switched communications session between a mobile station and a first base station associated with a first type of wireless system;
determining if handoff is required from the first base station to a second base station associated with a second, different type of wireless system; and
in response to determining that the handoff is required, sending a message from the first base station to the second base station over an interface between the first base station and second base station, the message indicating to the second base station that handoff is required, wherein sending the message comprises sending the message over a link that directly connects the first base station and second base station.

Claim 16. A first base station system that performs wireless communications with a mobile station according to a first protocol, the first base station system comprising:

an interface to a second base station system that performs wireless communications with the mobile station according to a second, different protocol; and

a controller to communicate bearer traffic for a packet-switched communications session with the mobile station,

the controller to further exchange messaging with the second base station system through the interface to perform a handoff of the packet-switched communications session from the first base station system to the second base station system, wherein the interface allows the messaging to be sent from the first base station system directly to the second base station system.

Claim 24. An article comprising at least one non-transitory machine-readable storage medium containing instructions that when executed cause a first base station system to:

exchange signaling according to a first protocol with a mobile station to establish a packet-switched communications session between the mobile station and another endpoint;

determine if a handoff is required to a second base station system that performs wireless communications with the mobile station according to a second, different protocol; and

exchange messaging with the second base station system through a link between the first and second base station systems to perform the handoff, wherein exchanging the messaging with the second base station through the link comprises exchanging the messaging with the second base station through the link that directly connects the first base station system to the second base station system.

The claims have been amended to uniquely capture a direct connection used between two base stations of different protocols in the event of a required handoff.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

For each of the independent claims 1, 16 and 24, the prior art fails to further explicitly describe:

in response to determining that the handoff is required, sending a message from the first base station to the second base station over an interface between the first base station and second base station, the message indicating to the second base station that handoff is required, wherein sending the message comprises sending the message over a link that directly connects the first base station and second base station.

The closest prior art, Lehtinen (US 6,532,226) describes a direction connection for transmission from a GSM-protocol base stations to a UMTS-protocol base station for measured signaling which assist in handovers or Dolan (US 6,628,632) describing

Art Unit: 2471

direct handoff between base stations, fail to anticipate or render the claimed features obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Vollmer (US 6,879,830) describing inter-base station communication during handover, Foster (US 6,501,952) describing hand-off utilizing direct call pickup, Back (US 7,089,008) describing inter-system handover, Kauhanen (US 7,254,392) describing intersystem handover.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to WARNER WONG whose telephone number is (571)272-8197. The examiner can normally be reached on 6:30AM - 3:00PM, M-F.
